Name
x_2190305_asset_0_asset_repair_request
Description
Allow read for records in x_2190305_asset_0_asset_repair_request, for users with role x_2190305_asset_0.employee.
Applies To
No. of records matching the condition: 0
(empty)
Application
Asset Repair Request System
Active
Advanced
Conditions
Access Control Rules have two decision types, and these types will behave differently depending on conditions.
1. Allow Access: Allows access to a resource if all conditions are met. Additional ACLs may grant access to records where this ACL has not granted access.
2. Deny Access: Denies access to a resource unless all conditions are met. Additional ACLs may not grant access to records where this ACL has denied access.

Update Record
Create or Update Record
Create or update a record in a ServiceNow table by determining if it already exists. Add records that do not exist, and update existing ones. Identify existing records by selecting unique fields. Set field values dynamically and enforce server-side validation rules (data policy, business rules, dictionary-defined mandatory fields). UI policy does not apply.
